

Press Clippings from Wall Street Communications

Broadcast Engineering
September 1, 2006

IBC Product Source

Headed to IBC? Even with five days, you'll be hard-pressed to cover all the sessions and the convention exhibition floor. However, to help readers get a head start, the editors of *Broadcast Engineering's* World Edition have sifted through hundreds of new product announcements in order to highlight some of the products you'll see on the show floor.

The products shown here represent but a small sample of the key technologies and new services you'll see at the convention. Based on the number of press releases we've already received, you can expect to find thousands of new products being shown from more than 1000 exhibitors.

CONTENT MANAGEMENT

NETIA Logging Media

Allows broadcasters, telecom and mobile phone operators, and Internet companies to capture, index, transcode and distribute audio and video content; video and audio files captured into the database are individually examined, segmented and completed with the necessary associated metadata in an automatic or semi-automatic mode through the use of various speech-to-text and image recognition techniques.
